

THE CURRENT WEATHER REPORT LIVE FROM TYROL

WEATHER IN SERFAUS-FISS-LADIS

Your holiday is approaching swiftly and the anticipation is growing. The first question that comes to mind: How is the weather going to be in the Alps of Serfaus-Fiss-Ladis? All current weather data and daily trends, including forecast for the upcoming days, are available at a glance now!

today, Saturday 18.05.2024

During the Pentecost holidays, there will continue to be only slight differences in air pressure, which means that daily periodic effects will play a more important role. In particular, the sun should be able to break through better in the mornings. However, as the day progresses, cumulus clouds will increase, and isolated rain showers or even thunderstorms are possible. These are most likely to occur in the north, as slight southerly föhn effects in the inner Alps should reduce the risk of showers. Towards the middle of the week, the influence of low pressure will increase, resulting in dense clouds and more frequent downpours. Tuesday is expected to be particularly wet. In the second half of the week, the weather will remain unsettled, while the sun should reclaim more space in the sky. Therefore, the risk of rain showers will remain elevated.
